FARM WAGE RATES RISE, ALONG WITH EMPLOYMENT

Wage rates of hired farm workers in the United States on July 1 were 8 percent higher than a year earlier and the highest on record, the Bureau of Agricultural Economics reported today. Since April 1, wage rates have risen 10 percent, about double the usual increase during the quarter. Wage rates were 331 percent of the 1935-39 average for this date (390 percent of the 1910-14 average).

In the Nation as a whole, the number of hired workers on July 1 was about 7 percent larger than a year earlier. A total of 11,586,000 persons were employed on farms on July 1, including farm operators and family labor, 4 percent more than on July 1, 1945. The composition of the total farm labor force, however, was somewhat different from that of a year earlier. This year in contrast to the situation last year, about a million returned veterans were at work on farms. Substantially fewer foreign workers were employed than last year. The total of foreign nationals employed on July 1 was 58,000, compared with the July 1, 1945, total of 78,000 foreign workers and 70,000 prisoners of war. No prisoners of war were employed on farms on July 1 this year.

Wage rates have advanced rapidly since 1941. On July 1, 1941 daily wage rates without board averaged \$1.98 compared with the present rate of \$4.84. The advance in farm wage rates appeared to be slowing down in the last half of 1945 and the first quarter of 1946. However, along with the increases in industrial wage rates during recent months, farm wage rates have again climbed.

Wage rates in all geographic regions were higher on July 1 than on either April 1 or July 1 a year earlier. In only the East South Central region were wage rates on July 1 less than 3 times as high as in the 1910-14 period. In the Pacific Coast States they were over 4 times as high.

Farm work was proceeding on or slightly ahead of the usual schedule. Corn and soybeans had been planted in good season, whereas a year ago rains had seriously delayed planting. Cotton chopping and cultivation was well in hand despite the weedy condition of a month ago. Rain interfered somewhat with farm work in scattered areas in the last week of June, but there was little serious delay. Supplies of farm workers were

UNITED STATES DEPARTMENT OF AGRICULTURE
Bureau of Agricultural Economics

reported adequate in most areas.

The number of persons at work on farms increased seasonally from June 1 to July 1, except in the South Central States, where the peak of cotton chopping and much of the small grain harvest were past. More workers were employed on farms than a year earlier in all regions except New England, where there was little change.

With the peak of spring farm work behind in the South, the number of family workers on July 1 in the Nation as a whole totalled slightly less than a month earlier but more than on July 1 last year. The number of hired workers increased seasonally during June. In the Middle Atlantic and Pacific Coast States the number of hired workers increased by about one-third from June 1 to July 1.

In the New England States the number of persons employed on farms was about the same as a year earlier. The number of family workers was larger than on July 1, 1945, but there were fewer hired workers. Hay harvest and crop cultivation were the most important jobs.

The number of persons at work on farms in the Middle Atlantic States increased more than usual from June 1 to July 1 with the largest increase in hired workers. Both family and hired workers were more numerous than a year earlier. Weather late in June permitted steady field work. Crop cultivation and hay making were pushed in the entire region. In both New Jersey and Pennsylvania, barley harvest had started. Major truck crops being harvested in New Jersey were snapbeans and onions, with some early apples being picked. Picking of sour cherries was in progress in Pennsylvania, and in New York the Long Island potato crop was being harvested.

Hay-making and cultivation of row crops were also important jobs in the East North Central States about July 1. These jobs were being hurried along as fast as possible in Michigan and Wisconsin and the Northern half of Ohio, Indiana, and Illinois to clear the way for winter wheat harvest which was already underway in the Southern part of the region. The number of persons at work on farms was up only slightly from a month earlier, and was larger than on July 1 a year ago. The seasonal decrease in the number of family workers was about the same as a year ago, but the number of hired hands employed increased more than usual.

The number of both family and hired workers in the West North Central States on July 1 were well above a year earlier. Seasonal increases during June were larger than last year. With small grain harvest and hay making under way, wage rates per day without board averaged \$6.18 on July 1, up about a half dollar from a year earlier. Wheat harvest had moved northward into southern Nebraska and was about half finished in Missouri and Kansas. In southern Kansas plowing of wheat stubble land was in progress. In the more northern sections of the region, hay-making and crop cultivation were major jobs.

In the South Atlantic States cotton chopping was generally completed early in June. The tobacco harvest on July 1 was about completed in Florida and was getting started in the Border Belt in North Carolina. In Virginia small grain harvest was under way. Hay making and crop cultivation were of major importance in Delaware, Maryland and West Virginia.

UNITED STATES DEPARTMENT OF AGRICULTURE
Bureau of Agricultural Economics

The number of persons employed on farms increased from June 1 to July 1, contrary to the usual seasonal pattern. Both family and hired workers showed the contraseasonal movement. The farm labor force on July 1 was larger than a year earlier but still much below the pre-war level. Daily wage rates without board averaged \$3.48, an increase of 16 percent from last July.

With a lull in cotton crop operations about July 1, the number of persons at work on farms in the East South Central States decreased from June 1. Hired hands at work totaled about the same as a year ago but the number of family workers remained slightly in excess of a year earlier. Farm wage rates in this region were the lowest in the Nation at 292 percent of the 1910-14 average. Daily wages without board averaged \$2.38, an increase of 20 cents from April 1, and 23 cents above those on July 1 a year ago. Small grain harvest was under way in most areas of the region. Cultivation of corn and tobacco was still requiring some time in Kentucky. Some hay was being made in all States.

In the West South Central States, the total number of persons employed on farms around July 1 was smaller than on June 1, owing to a decrease in the number of family workers. However, the number of family workers remained larger than a year earlier. The seasonal increase in the number of hired workers was greater than a year ago. The small grain harvest was about finished in the entire region, with much of the stubble plowed for fall seeded grains in Oklahoma and Texas. In the High Plains of Texas, cotton and sorghums were still being planted.

Farm work was well in hand in the Mountain States on July 1 and there was a slight decline in the total number of persons employed on farms. Crop cultivation, irrigation, hay making and other jobs were making use of fewer family workers than a month earlier, but more hired hands were being used. The number of family workers on July 1 was larger than a year earlier, but the number of hired workers showed little change.

Farm wage rates in the Pacific States on July 1 were the highest in the country and also showed the greatest increase from 1910-14. Daily wage rates without board were \$8.23. The \$9.00 per day wage rate without board in Washington was the highest for any State. The number of hired workers on July 1 increased sharply over a month earlier, but about maintained the increase of past months over the previous year. Family workers totalled about the same as a month ago and a little more than a year earlier.

In California major farm jobs were in the harvest of cherries, apricots, citrus, a few early peaches, and vegetables, and the cultivation and harvest of barley, wheat, oats and flax. Hay harvest and harvest of peas were important jobs in Oregon. Preparations for grain harvest were under way in eastern Washington, while in the western part of the State harvest of green peas for processing and harvest of raspberries were jobs of importance.
